Surprising Development in the Top 10 OSHA Violations for 2018

By Miles Free – Interim Director, PMPA

Every year, we review the top 10 OSHA violations for the prior calendar year in order to help our members proactively make their shops safer and more compliant. OSHA just released its “Top 10 Violations” at the National Safety Council Congress and Expo. As we reviewed the top reported violations, we noticed a trend. A surprising trend. Let’s see if you can notice it, too.

Most Cited Violations of 2018:

1. Fall Protection (1926.501)
2. Hazard Communication (1910.1200)
3. Scaffolding - General Requirements (1926.451)
4. Respiratory Protection (1910.134)
5. Control of Hazardous Energy - Lockout/Tagout (1910.147)
6. Ladders (1926.1053)
7. Powered Industrial Trucks (1910.178)
8. Fall Protection - Training Requirements (1926.503)
10. Personal Protective and Lifesaving Equipment - Eye and Face Protection (1926.102)

Control of hazardous energy (lock-out/tag-out) is of critical importance in our shops where our performers are working with high-horsepower, high-torque equipment equipped with hardened steel and carbide tools, pinch points and high voltage energy sources.

Powered industrial trucks are in widespread use in our shops, and there is no denying the potential for injury and/or property damage that such a vehicle can inflict if carelessly operated. Depending on type, these vehicles can present unseen and unheard dangers, such as carbon monoxide in exhaust fumes or silent running when electric trucks are used. The need for flashing lights and audible alarms is an important means of protecting those in the area who might otherwise not be aware of their movement and possible hazards.

Machine guarding is, to me, the most obvious of these in importance in our shops. Our shops use high rates of kinetic energy and rotational speed to modify raw materials into finished products. Clearly the forces involved are capable of removing cubic inches of metal per minute off of solid steel are more than powerful enough to permanently remove human appendages, flesh and bone. All of us recognize the potential for injury, entanglement and even death from accidental contact with our equipment. Defeating or failing to use guards is never justified in our shops.

So what was the surprise in this year’s “OSHA Top 10 Violations” as applied to our precision machining and general industry shops? Only four of those 10 violations are applicable to us. For the first year that I can remember, the number of violations in the OSHA Top 10 is evenly split between general industry and construction at five apiece. In 2017, general industry outnumbered construction 6:4. In 2016, 2015, 2014 and 2013, the ratio of general industry to construction was 7:3.

The relative share of general industry standards being violated in the OSHA Top 10 Violations in 2018 has declined, compared with the share from construction. Some might

**PMPA Member JC Gibbons Manufacturing Finds Success in Diversification and Exceptional Customer Service**

“There were some fantastic times, and then there were some hard times and a lot of long hours,” Mr. Gibbons says. “My dad and my grandfather were always looking two steps ahead, and we continue to diversify our portfolio of customers so we are less reliant on an industry’s cyclical nature. Not putting all our eggs in one basket has helped us continue doing business for 60 years now.”

JC Gibbons joined PMPA in 1992. Since becoming a member, Mr. Gibbons says he and his team greatly benefit from the openness and friendliness when it comes to the sharing of information between members. The company also stays up to date on all the latest trends and issues within the industry by taking advantage of PMPA’s listserves, conferences, shop visits and other helpful tools the organization provides.

“PMPA has been a terrific resource we’ve enjoyed through the years,” Mr. Gibbons says. “The number one thing we’ve gained is the opportunity to know and meet other companies doing the same thing who open up their shops, so we can all gain new information that we would’ve otherwise had to learn the hard way.”

*JC Gibbons Manufacturing Inc. is located at 35055 Glendale St., Livonia, Michigan 48150. Phone: 800-734-8596. Website: jcgibbons.com*

rush to say this is a result of a change in OSHA enforcement priorities. We are convinced that the decline of standards being violated that relate to our shops reflects a reduced incidence of these kind of violations in our shops as a contributing factor. There is no doubt that OSHA is addressing the top violation priorities under its authority. We are pleased to note that the share that might be found in our shops has declined. That is good news for OSHA, for our shops and, most important of all, our performers.

To grow and profit today, you have to work smarter. You have to relentlessly eliminate waste. PMPA is the way to expand your knowledge and increase your capabilities in order to grow your business. Through daily interaction with PMPA staff members, you have access to our expertise on important issues. You’re also able to tap the collective knowledge of your peers: those who have “been there” and “done that.”

Through the meetings, resources and online connections, reports and more, we give you the tools to grow. We look at emerging markets and let you know what’s hot and what’s not. PMPA programs help you understand your markets so you can make sense of the issues. And we provide relevant information to help you make informed decisions.
